About Us

Roger and Kathleen Sego established Sego's Herb Farm in 1998

Sego's Herb Farm is a family-owned, 55 acre, certified organic farm with 8 acres currently under combined goldenseal and North American ginseng production. We also have 450 Ginkgo biloba; one of the largest single stands of ginkgo in the United States.

Roger Sego is President of the Northwest Ginseng Growers Association (NWGGA).

Sego’s Herb Farm is located in La Center, Washington in the center of the Pacific Northwest. This region boasts pure air, a long, cool growing season, and rich, volcanic soil; all ideal ingredients to enable us to offer the world’s finest organic goldenseal, ginkgo, and North American ginseng products. Sego’s Herb Farm is fully certified and authorized by permit to ship and export ginseng, goldenseal, and ginkgo to wholesale buyers throughout the world.

We’re located just 30 minutes north of the Portland International Airport!
GOLDENSEAL

Goldenseal has emerged as one of the most popular herbal remedies on the American market today. The plant has been prized for centuries by native Americans as an anti-inflammatory, an antibiotic, and for its stimulatory effect on digestion. During the last few decades, goldenseal has become so popular as a natural remedy that the plant’s existence in the wild is in jeopardy. Collectors of goldenseal have hunted this herbal antibiotic to near extinction.

Sego’s Goldenseal Rootlets

Goldenseal (Hydrastis canadensis) is a shade-loving plant native to the woodlands of eastern North America. The plants require three to five years of growth before their roots are harvestable, so recovery from over-zealous collection is a long process. Our certified organic cultivation of goldenseal, and sale of endangered species only through our CITIES permit, encourages the survival of these valuable plants while allowing us to provide a continuous supply of pure goldenseal powders, herbs, leaves, and rootlets to wholesale buyers.

GINKGO

Interest in ginkgo is increasing worldwide. Ginkgo–flavoneglycoside, ginkgolides, and bilobalides, the biologically active agents in ginkgo (Ginkgo biloba) leaves, are well-documented as vasodilators and antioxidants. Ginkgo has become the best-selling medicinal herb in the United States and is also the most commonly prescribed herbal medicine in Europe, where it is used to treat such diverse conditions as Alzheimer’s, bronchial coughs, strokes, and asthma.

Sego’s 2002 Crop of Ginkgo Leaves

Sego’s 450 ginkgo trees constitute one of the largest single stands of ginkgo trees in the United States and are registered in the national registry both because of the stand’s size and its location in a pollution-free area. Our fresh and dried leaves are available to wholesale buyers each October.

GINSENG

In the first century A.D., the medical practices book Shen-mung pents’ao ching described ginseng as “enlightening the mind, and increasing the wisdom. Continuous use leads one to longevity.” For thousands of years, cultures throughout the world have used both Asian ginseng (Panax ginseng) and American ginseng (Panax quinquefolium) for their anti-tumor, anti-oxidant, anti-viral, stress-relieving, and anti-aging properties. Because of the herb’s ability to normalize functions throughout the body, ginseng has been described as an “adaptogen”.

Not only is ginseng the most revered plant in traditional Asian medicine, it is also one of the top-selling medicinal herbs in the United States. To meet this demand, we provide the finest organic American ginseng (Panax quinquefolium) powders and roots. All of the farm’s ginseng is pollution-free and fully adaptogenic to encourage long-term, continuous use. In addition, as brokers for many local ginseng growers, we can provide up to 20,000 pounds of high quality organic and non-organic powder, fiber, and capsules to wholesale buyers.
